MyRBQM Approach to Risk Based Quality Management

Johann Proeve, PhD
Chief Scientific Officer
Cyntegrity

Recently, at a Novo-Nordisk Global Data Management Conference

Question:

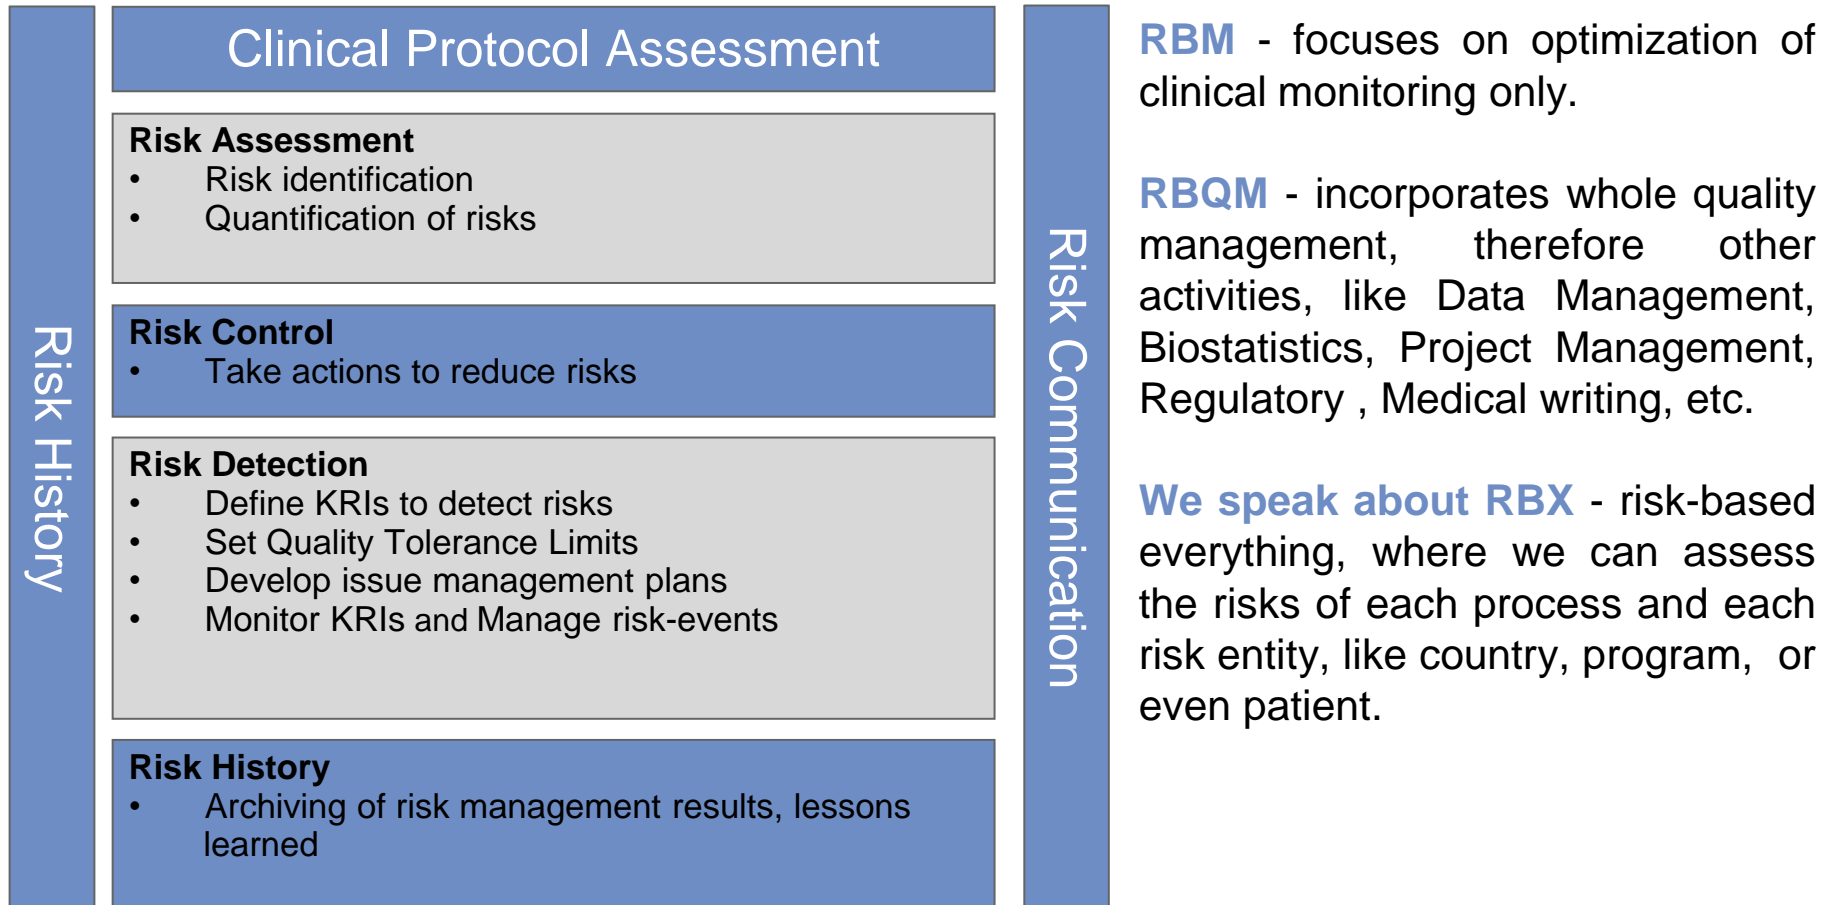

What is the greatest challenge for clinical data management ?

Answer:

**To manage and understand the many systems and the many copies of the
study databases**

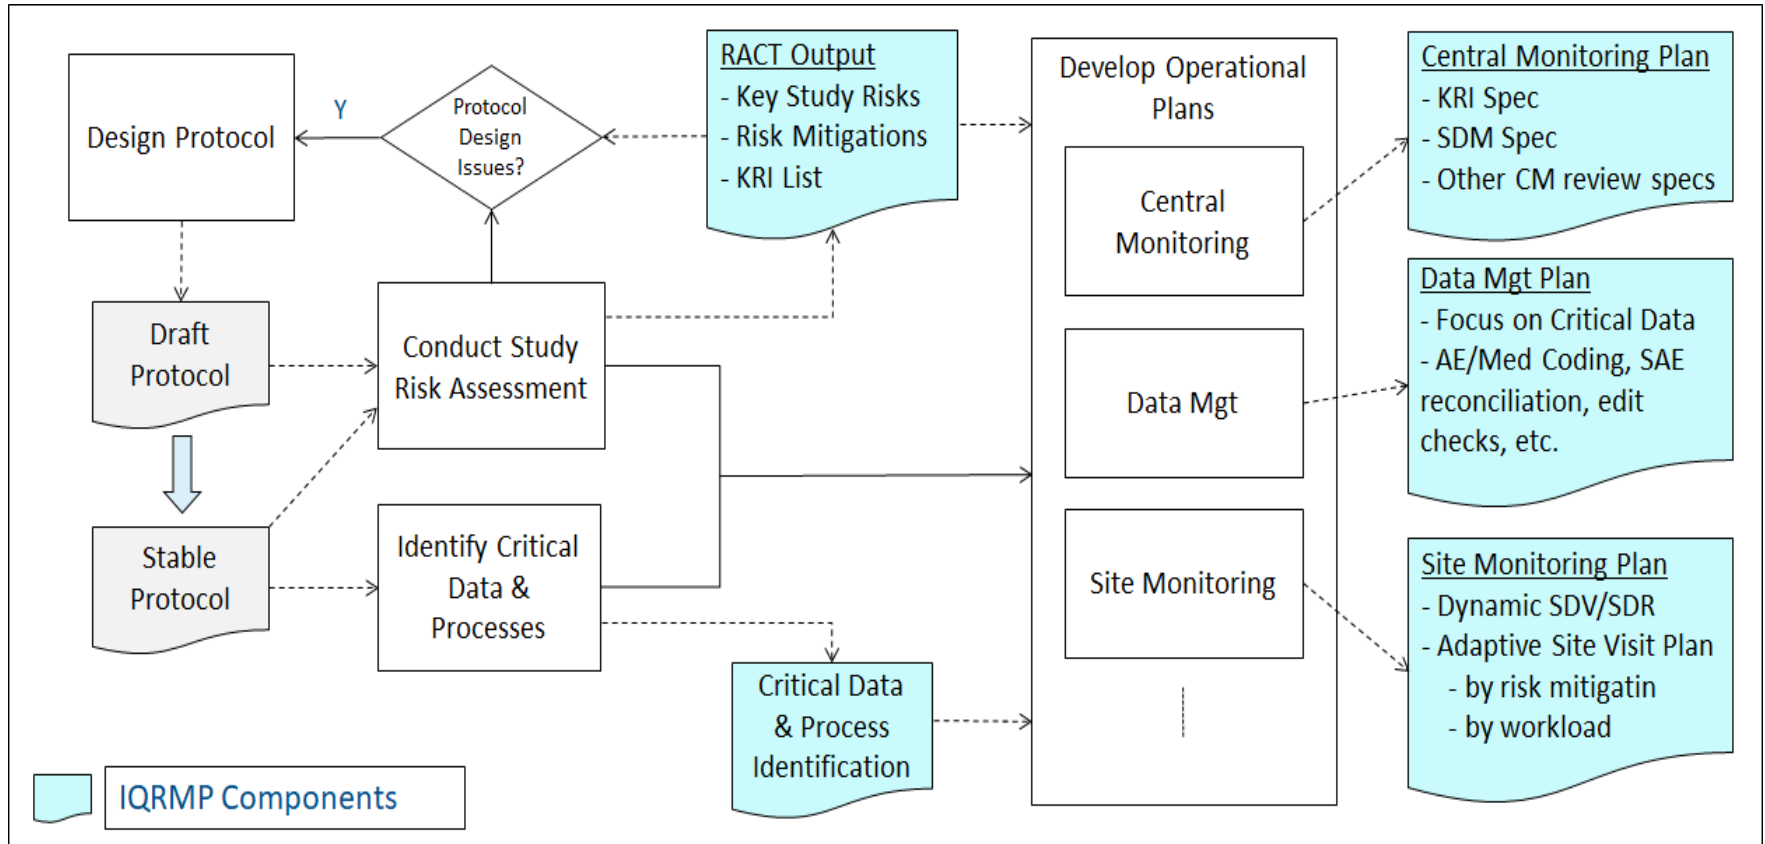

..... and that is probably true for many other functions as well

Holistic Risk-based Quality Management (RBQM)

The overall RBQM process for a study

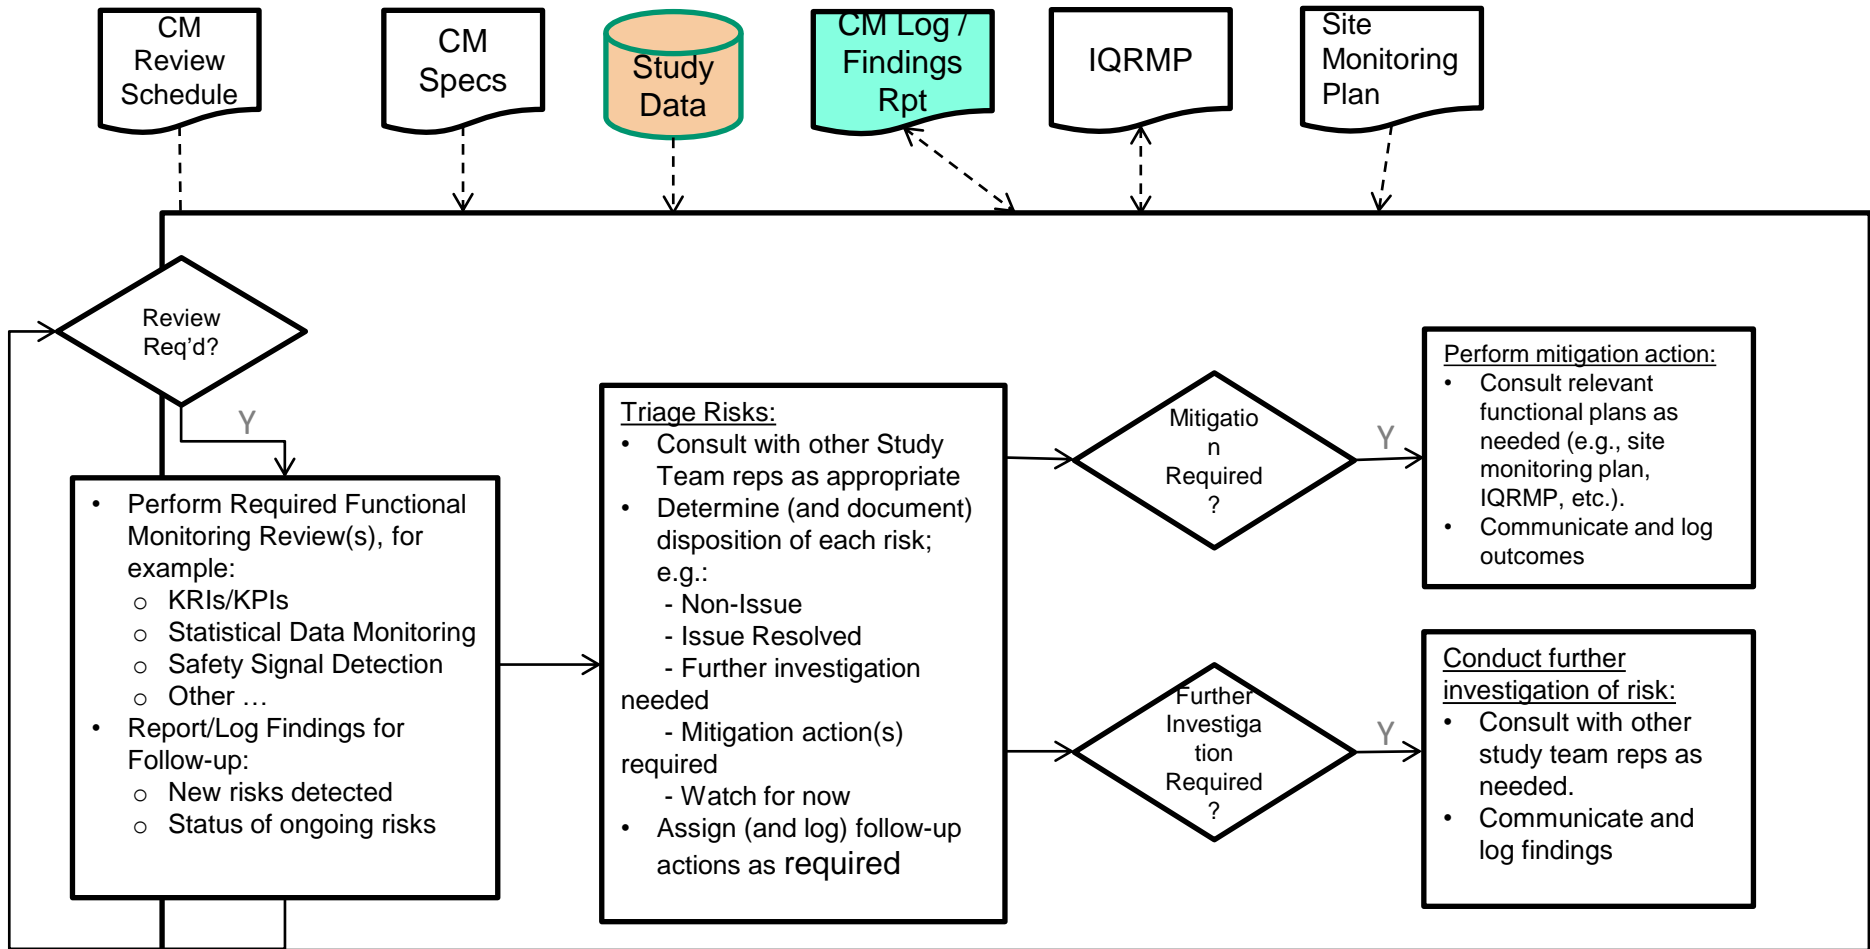

Pre-study risk planning

RBQM approach as developed by a DIA working group chaired by Steve Young

The overall RBQM process for a study

During study conduct

RBQM approach as developed by a DIA working group chaired by Steve Young

Transcelerate RACT

http://www.transceleratebiopharmainc.com/wp-content/uploads/2013/10/2_RACT_20140411.xlsx

Risk Categories according to Transcelerate

1. Safety
2. Study Phase
3. Complexity
4. Patient population
5. Technology
6. Data collection
7. Endpoints
8. Operational experience
9. Investigational Product
10. Supply chain
11. Blinding
12. Operational complexity
13. Geography
14. Your own defined area as applicable

Category BLI — Blinding

Delete This Category

Edit This Category's Details

Create a New Question

? Question BLI-1 — How is the blinding set up? 1

Delete Edit

? Question BLI-2 — How are the blinding assignments being administered/created? 2

Delete Edit

? Question BLI-3 — What is the risk of unblinding? 1

Delete Edit

? Question BLI-4 — Are there potential ways to unblind a patient other than through study medication? 1

Delete Edit

Critical processes in the study?

1. Under-reporting of AEs and SAEs
2. IP injection procedure
3. Delays in EDC data entry
4. IVRS not being followed, mis-randomization
5. One site enrolling many more patients than the others
6. Delays in response to queries
7. Discrepancies in the assessment by the patient and the investigator
8. CRO does not assign the 'A-Team' to this study
9. Changes in the regulatory requirements during study conduct
10. New state-of-the art guidelines for development of anti-infectives
11. Monitoring reports not available on time

Review the
processes for a
new study

Critical data in the study?

1. Enrollment per month
2. Injection volume per patient
3. Distribution of male / female patients
4. Number of serious adverse events
5. Number of lost to follow up patients
6. Main efficacy data completeness
7. Number of strokes / myocardial infarctions
8. Number of days with pain
9. etc

Review the
processes for a
new study

Risk scoring

Create the list of risks and the scoring for those risks

| Risk | Impact | Likelihood | Detectability | Risk Score |
|----------------------------------|--------|------------|---------------|------------|
| Enrollment | 3 | 3 | 1 | 9 |
| Injection volume / comparability | 3 | 2 | 2 | 12 |
| 100-200 male patients | 2 | 3 | 1 | 6 |
| SAE reporting | 3 | 1 | 2 | 6 |
| Lost to follow up | 3 | 3 | 1 | 9 |

Mitigation actions for the risks

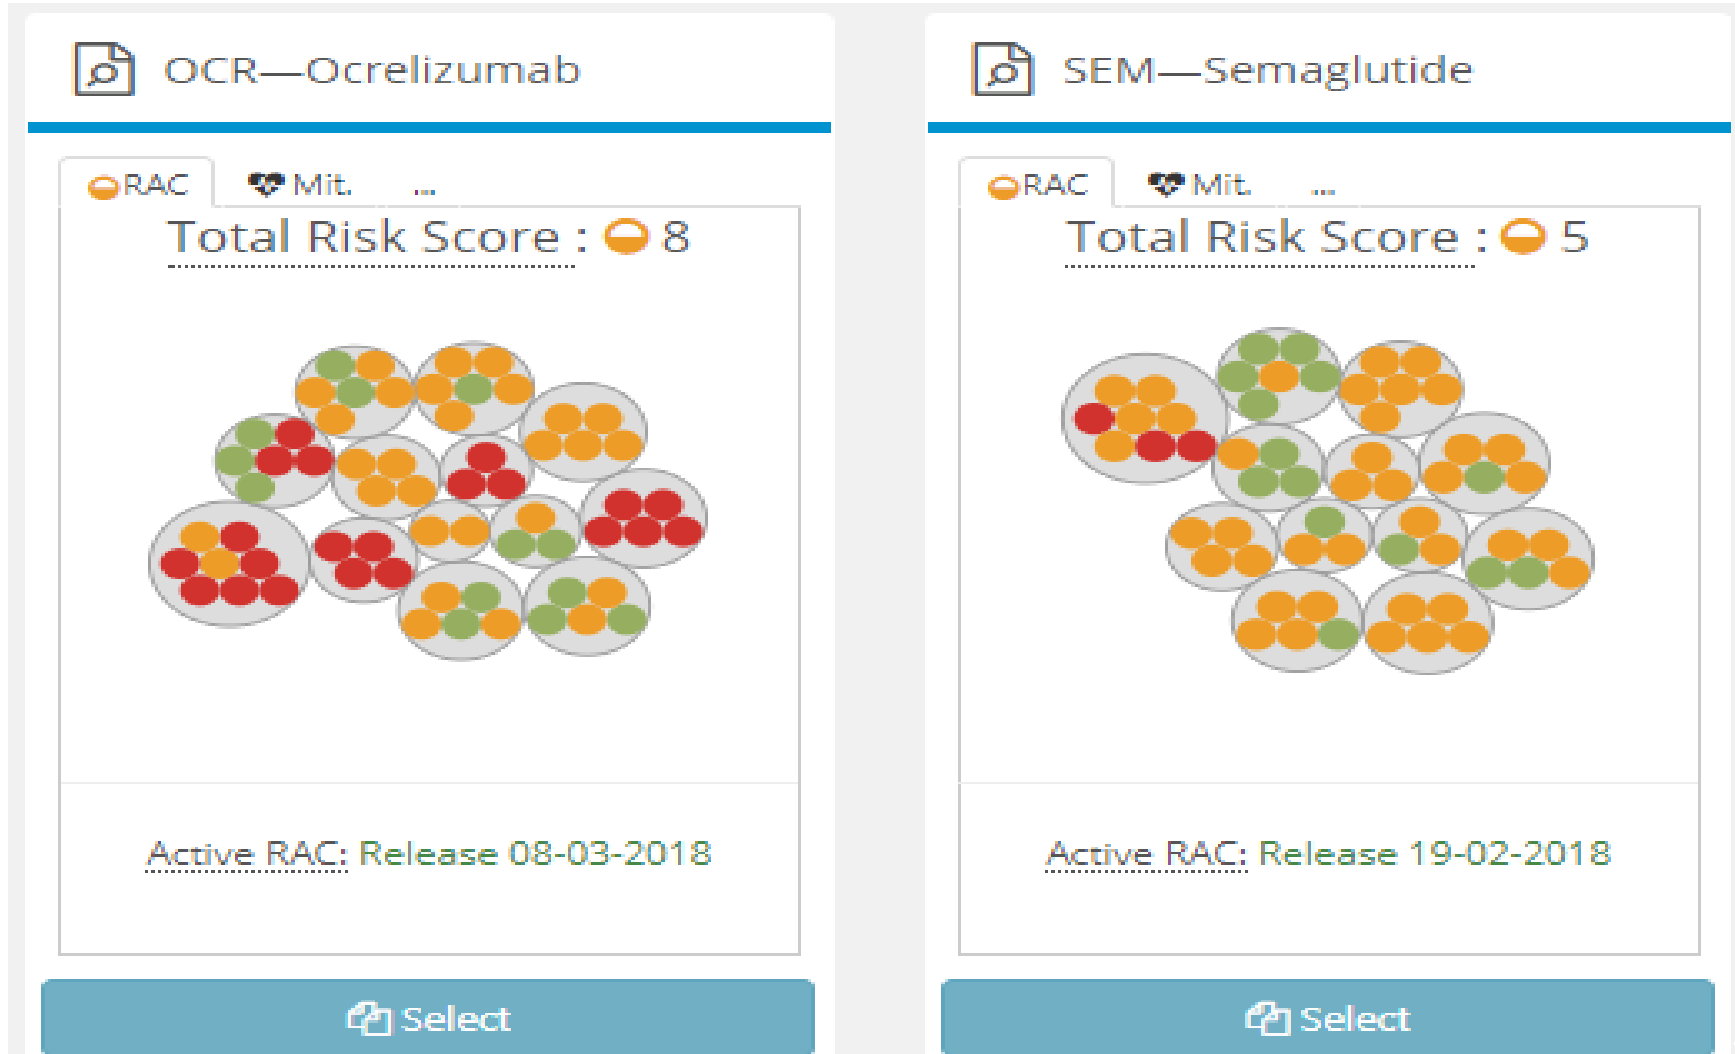

Create the list of risks and the scoring for those risks

| Risk | Mitigation 1 | Mitigation 2 | Mitigation 3 | Mitigation 4 |
|----------------------------------|---|--|-----------------------------------|----------------------|
| Enrollment | Keep proxy sites in place | Review site EHRs for subject number confirmation | Continuously track enrollment | Award fast enrollers |
| Injection volume / comparability | Provide clear instructions for volume calculation | | | |
| 100-200 male patients | Check EHRs for sites with male subjects | | | |
| SAE reporting | Create interface between EDC and PV system | Implement macro on important medical event list | Print SAE handling laminated card | |

Risk-based Quality Management

Process: Design Phase, output

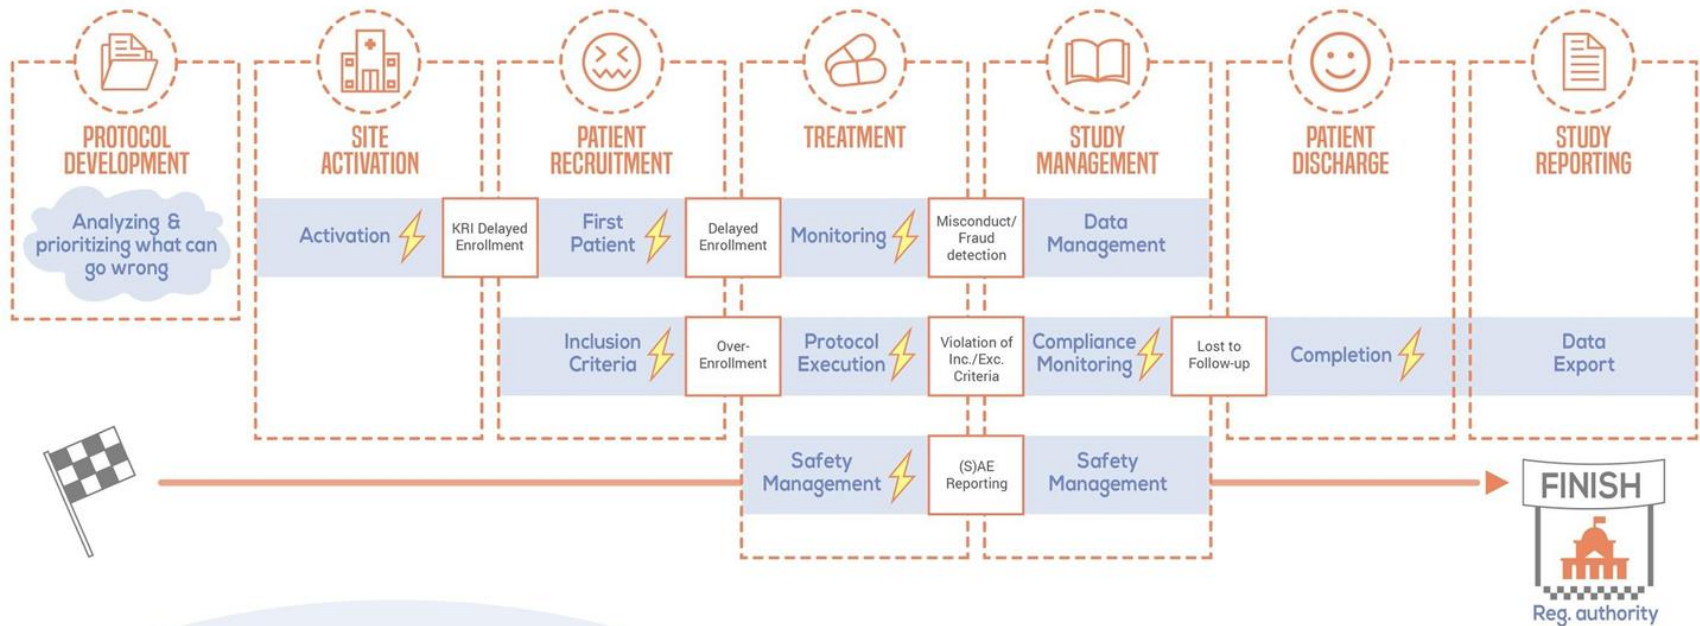

Key Risk Indicators for the various steps in a study

KEY RISK INDICATOR

KEY RISK INDICATORS (KRIs)

Key Risk Indicators (KRIs) - metric for measuring a specific risk, with its relevant control limits (thresholds) and alerts. Important tool in RBQM strategy needed for a facilitating risk monitoring and mitigation and enhancing risk reporting.

KRIs Sources

Business Intelligence Layer

Recording Systems in Clinical Trials

Frequency of KRI measurement

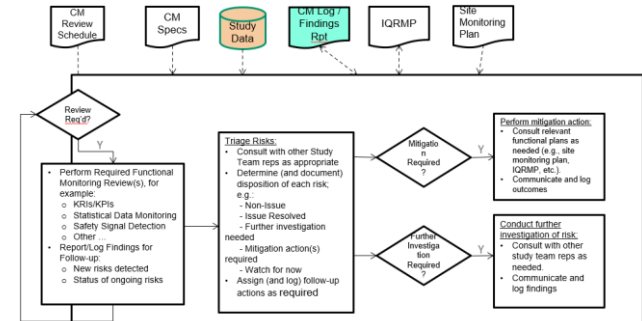

Identify the key risk indicators for the risks

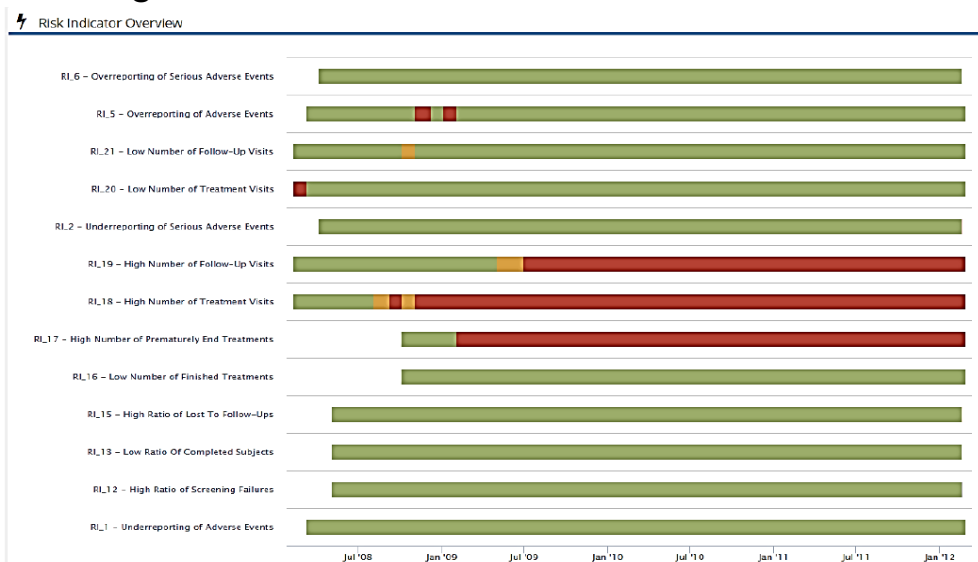

Create the list of risks and the scoring for those risks

| Risk | Indicator 1 | Indicator 2 | Indicator 3 | Indicator 4 |
|---------------------------------|---------------------------------|-------------------------------------|-------------------------------------|----------------------------------|
| Enrollment | # of subjects / month | # of subjects / site | Length of break in Sept. in China | |
| Infusion volume / comparability | Volume infused / subject | Infusion duration | Infusion interruptions | |
| 100-200 male patients | # of male subjects | % of male / female subjects | % of male/ female subjects per site | |
| SAE | # of SAEs | # of AEs that should have been SAEs | # of SAEs / subject | Ratio of SAEs / site and subject |
| Lost to follow up | # of lost to follow up subjects | # of informed consent withdrawn | # of drop out due to AE | |

Rules for targeted monitoring

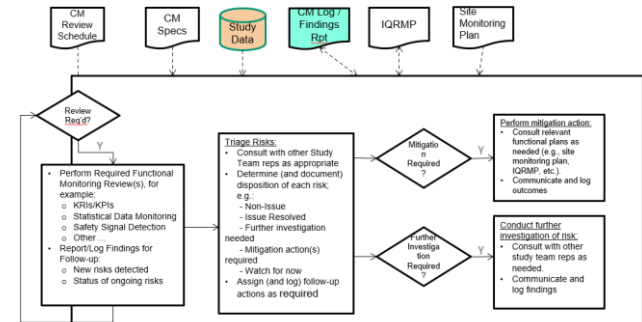

1. Define thresholds triggering monitoring activities
2. Review extremes for plausible explanations (vacation time, Covid-19, end of season)
3. Decide on sending site monitor
4. Decide on activating audit group
5. Deciding on closing site and what to do with the data

Proactive Approach: trends, patterns, and outliers Predictions

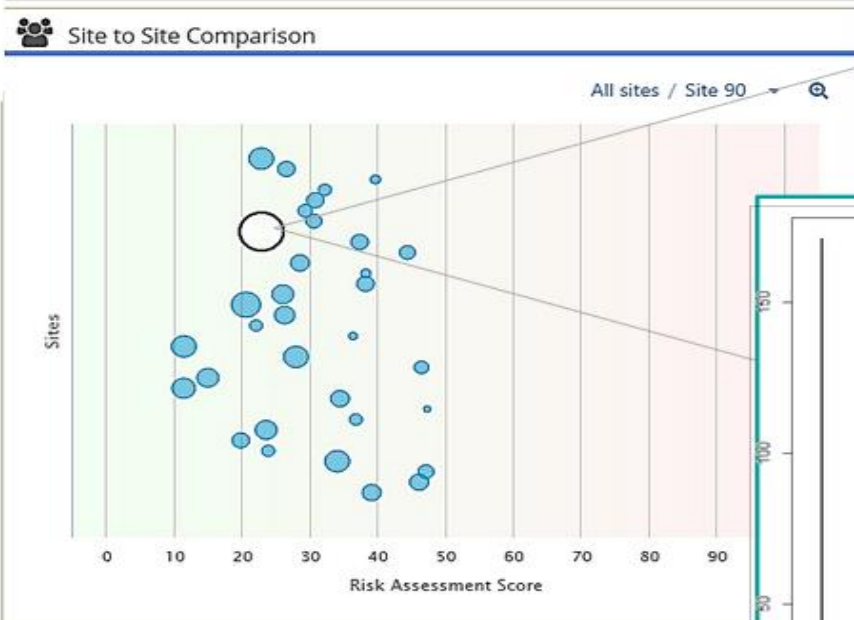

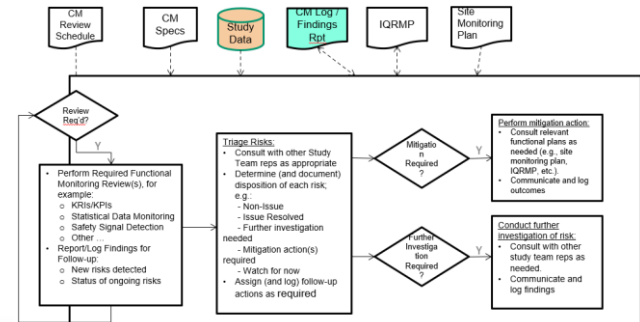

Source: Cyntegrity's MyRBQM Portal

Source: Cyntegrity's MyRBQM Portal

Centralized statistical monitoring: Look for digit preference, Strange distributions, Outliers, Patterns

| | | | | | | | |
|-----|----|----------|--|------|----|----|-----|
| 609 | 25 | 12507009 | visit 17, week 44, study day 308 +/- 4 | 36 | 70 | 60 | 110 |
| 610 | 25 | 12507009 | visit 18, week 48, study day 336 +/- 4 | 35.5 | 70 | 62 | 95 |
| 611 | 25 | 12507009 | visit 19, week 52, study day 364 +/- 4 | 35.5 | 90 | 64 | 120 |
| 612 | 25 | 12507009 | visit 2, baseline, study day 01 | 36 | 78 | 72 | 118 |
| 613 | 25 | 12507009 | visit 3, week 02, study day 15 | 36.2 | 70 | 61 | 130 |
| 614 | 25 | 12507009 | visit 4, week 04, study day 28 +/- 3 | 35.5 | 66 | 68 | 100 |
| 615 | 25 | 12507009 | visit 6, week 08, study day 56 +/- 3 | 35.8 | 80 | 86 | 130 |
| 616 | 25 | 12507009 | visit 8, week 12, study day 84 +/- 3 | 36.1 | 80 | 61 | 140 |

In conclusion

1. When implementing RBQM, consider analyzing the data on an ongoing basis once you got them from the respective system(s)
2. Assess all the steps necessary to create a holistic RBQM environment
 1. Risk assessment
 2. Critical data
 3. Critical processes
 4. May be even critical people
 5. Risk categorization
 6. Key risk indicators
 7. Thresholds
 8. Access to many different data source systems
 9. Accountability / Escalation
 10. Targeted monitoring
 11. Centralized statistical monitoring
 12. Predictions
 13. Link to CAPA
 14. Creation of an IQRMP by the system
 15. Documentation of all decisions made during the course of a study
3. Do not copy the data every time you want to run an analysis

In conclusion

Once such an approach has been implemented, users shall be able to manage all RBQM related activities within such a system
