1  PURPOSE
2
3  Krona is a flexible tool for exploring the relative proportions of
4  hierarchical data, such as metagenomic classifications, using a
5  radial, space-filling display. It is implemented using HTML5 and
6  JavaScript, allowing charts to be explored locally or served over the
7  Internet, requiring only a current version of any major web
8  browser. Krona charts can be created using an Excel template or from
9  common bioinformatics formats using the provided conversion scripts.
